RADIO TRANSMITTER

MK-Series radio remote control transmitters are a line of controls that were designed to be ultra-rugged and as water-resistant as possible. They are available in two, four, six, or eight button configurations with single or dual action push-buttons with tactile feedback through heavy gloves.

The enclosure is the most rugged we have designed—able to be submerged or driven over and still work. These controls are ideal for overhead cranes and lend themselves well to many other applications.

**Off-the-shelf systems
ready to ship today!**

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking

Typical applications

- On/off cranes
- Towing equipment
- Forestry equipment
- ?On/off cranes?
- ?Towing equipment?
- ?Forestry equipment?

*Custom configurations
also available to
fit any application.*
