

GUIDER

RADIO TRANSMITTER

Our GUIDER is a classic pistol-grip style handheld radio transmitter that's built to be used. They've been around and in the field day in and day out for over ten years now, and there are lots of reasons why.

Our switches are best-in-class: they're rated for millions of operations, and internally sealed with an additional external sealing boot. The proportional trigger has a long throw and is contactless, leaving the housing sealed, and offering the best speed control on a handheld we've ever seen. Onboard diagnostics let you know whether you've got a good radio link or not, and let you know at the handheld whether you've got any issues on your machine. They run off of rechargeable battery packs or replaceable AA batteries, enough to give you days of solid performance, and a low battery indicator lets you know well ahead of time to get a charge in. If your batteries are totally shot, you can always run off the backup wire tether cord if it's configured for it.

We've got loads of standard and configurable versions available in stock, and customize these for OEM applications all the time.

Off-the-shelf systems ready to ship today!

Standard & custom configurations available to fit any application.

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking

Frequency:	433 MHz	900 MHz	2.4 GHz		
Range (up to):	300'	1000'	2500'		
Power Source:	RECHARGEABLE	AA BATTERIES	AAA BATTERIES	LiPOLY	NiMH
Charging:	USB	PAD	CAN	SWAP
